System requirements and prerequisites

This guide is designed to provide you with information about the minimum system requirements for the Sage 200 Suite v2011. The information in this guide has been extracted from the Deployment and Installation Guide for the Sage 200 Suite v2011.

If you are installing the Sage 200 Suite you must read the Deployment and Installation Guide first.

About the system requirements for the Sage 200 Suite

The Sage 200 Suite is a modular system made up of the Sage 200 core components and optional market-specific vertical modules that integrate with the core product. When determining your system requirements, you must make sure that you have considered the requirements for the Sage 200 core components and each of the optional Sage 200 modules that you want to use, as different modules have different system requirements.

Supported Operating Systems – Core Modules

Sage 200 Core Modules	Windows XP Professional (32-bit only)	Windows Vista (32-bit only) (Business & Ultimate Editions)	Windows 7 (32-bit and 64-bit) (Professional, Enterprise & Ultimate Editions)	Windows Server 2003 (32-bit and 64-bit) Standard & Enterprise Editions, 2003 & 2003 R2	Windows 2003 Small Business Server (Standard & Premium Editions)	Windows Server 2008 (32-bit and 64-bit) Standard & Enterprise Editions, 2008 and 2008 R2	Windows 2008 Small Business Server (Standard & Premium Editions)
Sage 200 Core Components							
Sage 200 File Server	x	x	x ¹	✓	✓	✓	✓
Sage 200 Application Server	x	x	x ¹	✓	✓	✓	✓

Sage 200 Business Intelligence Server	x	x	x ¹	✓ ³	✓ ³	✓ ³	✓ ³
Sage 200 Business Intelligence Client (including Sage 200 BI Admin Tool)	✓	✓	✓	✓	✓	✓	✓
Sage 200 Business Intelligence Excel Client	✓	✓	✓	✓	✓	✓	✓

¹ Operating System not supported for production environments but may be used for demonstration and training purposes only.

² Sage 200 Business Intelligence requires Analysis Services, which is included with Microsoft SQL Server 2005 Standard Edition and Microsoft SQL Server 2008 Standard Edition (32-bit and 64-bit) and is only supported on these versions of SQL Server. Other editions of Microsoft SQL Server are supported if Sage 200 Business Intelligence is not required.

³ Additional configuration may be required if the server is also a domain controller. Refer to the Deployment and Installation Guide included on the Sage 200 Suite DVD for further details.

Supported Operating Systems – Optional Modules

Sage 200 Optional Modules	Windows XP Professional (32-bit only)	Windows Vista (32-bit only) (Business & Ultimate Editions)	Windows 7 (32-bit and 64-bit) (Professional, Enterprise & Ultimate Editions)	Windows Server 2003 (32-bit and 64-bit). Standard & Enterprise Editions, 2003 & 2003 R2	Windows 2003 Small Business Server (Standard & Premium Editions)	Windows Server 2008 (32-bit and 64-bit). Standard & Enterprise Editions, 2008 and 2008 R2	Windows 2008 Small Business Server (Standard & Premium Editions)

Sage 200 Construction							
Sage 200 Construction	See 'Sage 200 Construction Release Notes' for further details						

Notes:

We recommend that you install the latest service packs and Windows Updates for both your client and server operating system and database management system.

All modules in the Sage 200 Suite are 32-bit applications. Where supported on 64-bit platforms, the system runs in WOW64 emulation mode.

The Sage 200 suite does not support Itanium chipsets.

⁴ Operating System not supported for production environments but may be used for demonstration and training purposes only.

⁵ If you are intending to use Graphical Planner with Manufacturing, you must use 32 bit processors and 32 bit operating systems.

Installing the Sage 200 Suite using Citrix or Terminal Services

The Sage 200 Suite is designed around a 'rich-client' architecture that is best suited to deployment over a local area network. The Sage 200 Suite is supported in a Microsoft Terminal Services and Citrix Presentation Server environment with the following considerations:

- As Sage 200 is best suited to deployment on a local area network, where possible, we recommend that you run large batch processes, such as *Update Waiting Postings*, on a high specification client joined to the local area network.

If the entire solution is hosted remotely, large batch process tasks should be run 'out of hours' when more bandwidth and server resources are available.
- On Terminal servers or Citrix servers hosting Sage 200 client sessions, you must allow:
 - At least 500MB memory per user on the Citrix/Terminal Server, for each client session running occasional or one-off tasks, such as an account enquiry or price check.
 - At least 800MB memory for each client session processing for any prolonged period of time, for tasks such as checking in stock, or creating purchase orders.
 - You should run large batch processes and updates on the local area network, or out of hours.
- We do **not** support running the Sage 200 Suite over Citrix or Terminal Services on Microsoft Windows Small Business Server 2003 or Microsoft Small Business Server 2008.

This is because the Terminal Services Application Mode is disabled in these operating systems. See the following websites for further information:

<http://technet.microsoft.com/en-us/sbs/cc817589.aspx>

www.microsoft.com/canada/smallbiz/products/sbs/terminalservices.mspx

Supported Versions of Citrix / Terminal Services

Sage 200 Core Modules	Windows Terminal Server 2003 (32-bit and 64-bit) Standard and Enterprise Editions, 2003 & 2003 R2	Windows Terminal Server 2008 (32-bit and 64-bit) Standard and Enterprise Editions, 2008 & 2008 R2	Citrix Presentation Server v4.5 (32-bit only, Standard, Advanced, Enterprise and Platinum Editions)	Citrix Presentation Server v5.x (32-bit only, Standard, Advanced, Enterprise and Platinum Editions)	Citrix XenApp Server v6.x (64-bit only, Standard, Advanced, Enterprise and Platinum Editions)

¹ If you are intending to use Graphical Planner with Manufacturing, you must use 32-bit processors and 32-bit operating systems.

Other supported components

Supported Database Systems

Microsoft SQL Server 2005 Workgroup Edition with Service Pack 4

Microsoft SQL Server 2005 Standard Edition with Service Pack 4 (32 and 64-bit editions)

Microsoft SQL Server 2008 Workgroup, Standard and Enterprise Editions with Service Pack 2 (32 and 64-bit editions)

Microsoft SQL Server 2008 R2 Workgroup, Standard and Enterprise Editions (32 and 64-bit editions)

Note: Sage 200 Business Intelligence requires Analysis Services. This is included with Microsoft SQL Server 2005 Standard and Enterprise Editions and Microsoft SQL Server 2008 and R2 Standard and Enterprise Editions (32-bit and 64-bit). It is only supported on these versions of SQL Server.

Supported Editions of Microsoft Office

Microsoft Office 2003 – Standard, Small Business and Professional Editions

Microsoft Office 2007 – Standard, Small Business, Professional, Ultimate and Enterprise Editions

Microsoft Office 2010 - Standard, Professional and Professional Plus Editions

Important: The Sage 200 Suite is not supported on 64-bit editions of Microsoft Office or Microsoft Office 365.

Supported Editions of Sage Payroll

Sage Payroll v16.04 – Standard, Professional and Bureau Editions

Sage Payroll v17.01 – Standard, Professional, and Bureau Editions

Browser Support

Sage 200 Browser Based Components	CRM	WTE	Remote Authorisation
Microsoft Internet Explorer v7	✓	✗	✓
Microsoft Internet Explorer v8	✓	✓	✓
Microsoft Internet Explorer v9	✗	✓	✗
Firefox v3.6.3	✗	✓	✓

Sage 200 Mobile - Supported Devices

Device	Supported Operating System
Blackberry Curve (8520, 8900)	Blackberry OS 4.5
Black berry Curve (890, Curve 3G)	Blackberry OS 5
Blackberry Bold (9000, 9700)	Blackberry OS 5
iPhone 3G	OS 3.2 / 4.0 / 4.2
iPhone 3GS	OS 3.2 / 4.0 / 4.2
iPhone 4	OS 4.0 / 4.2
iPad (iPhone App)	OS 3.2 / 4.0 / 4.2
iPod Touch	OS 3.2 / 4.0 / 4.2

Minimum Supported System Requirements

These are the **minimum** specifications for each of the machine types in a Sage 200 Suite deployment. Users with large databases or high numbers of concurrent users will require higher specifications.

Due to the wide variation of companies that use the Sage 200 Suite, it is not possible to give exact specifications for each system. Factors such as the concurrent number of users, size of the database and estimated growth should all be taken into consideration when sizing a server.

When tasks are processed, CPU and memory resources are used on both the client and the server. Therefore, the specification of both machines will affect the overall performance of the system.

If you are planning on running more than 50 concurrent users of the Sage 200 Suite, or expect to process a significant number of transactions, please contact us for specialist advice regarding system specification and deployment. See <http://support.sage.co.uk> for contact details.

Single Server Deployment

Sage 200 Server	Processor	Disk	Memory	Network	Video
Combined Sage 200 File, Application and Web Server with Microsoft SQL Server	Dual-core 2.6GHz or equivalent	7,200 rpm SATA with 4GB disk space after SQL Server is installed.	4GB	Gigabit Ethernet	1024x768

Sage 200 Server with Sage 200 CRM	Processor	Disk	Memory	Network	Video
Combined Sage 200 File, Application and Web Server with Sage 200 CRM and Microsoft SQL Server	Dual-core 2.6GHz or equivalent	7,200 rpm SATA with 4GB disk space after SQL Server is installed.	8GB	Gigabit Ethernet	1024x768

Sage 200 Client	Processor	Disk	Memory	Network	Video
Client	2.8GHz Pentium 4 or equivalent (e.g. Dual Core 1.6GHz)	7,200 rpm SATA with 500MB disk space required.	2GB	100 mbit Ethernet	1024x768

Split Server Deployment

SQL and Sage 200 File Server	Processor	Disk	Memory	Network	Video
Sage 200 File Server with Microsoft SQL Server	Dual-core 2.6GHz or equivalent	7,200 rpm SATA with 1GB disk space after SQL Server is installed.	4GB	Gigabit Ethernet	1024x768

Application Server	Processor	Disk	Memory	Network	Video
Sage 200 Application Server	Dual-core 2.6GHz or equivalent	7,200 rpm SATA with 1GB disk space required.	2GB	Gigabit Ethernet	1024x768

Web Server (WTE/Remote Authorisation)	Processor	Disk	Memory	Network	Video
Sage 200 Web Server	3.0GHz Pentium 4 or equivalent (e.g. Dual Core 1.6GHz)	7,200 rpm SATA with 2GB disk space required.	2GB	Gigabit Ethernet	1024x768

Minimum Supported System Requirements

CRM Server	Processor	Disk	Memory	Network	Video
Sage 200 CRM Server	Dual-core 2.6GHz or equivalent	7,200 rpm SATA with 2GB disk space required.	4GB	Gigabit Ethernet	1024x768

Sage 200 Client	Processor	Disk	Memory	Network	Video
Client	2.8GHz Pentium 4 or equivalent (e.g. Dual Core 1.6GHz)	7,200 rpm SATA with 500MB disk space required.	2GB	100 mbit Ethernet	1024x768

Prerequisites for the Sage 200 Suite

Before you install the Sage 200 Suite v2011, you must make sure the required prerequisites are installed on your system. You must also make sure that your installations of Microsoft SQL Server and Microsoft Internet Information Services (IIS) have the required settings.

Pre-requisites

- Microsoft SQL Server running in Mixed Mode (SQL Server and Windows Authentication mode) with Server Collation set to *Latin1, General, Case Insensitive (CI), Accent Sensitive (AS)*.
- Machines running the Sage 200 Suite must have a physical *c:* drive although the suite can be installed and run from a drive other than *c:*.
- Microsoft Internet Information Services (IIS) v6 or greater
- Microsoft DotNet Framework v3.5 Service Pack 1
This is included on the Sage 200 Suite v2011 DVD.
- Microsoft DotNet Framework v4.0
This is included on the Sage 200 Suite v2011 DVD.

The following components are installed automatically if they are not found on your system:

- Microsoft Web Service Enhancements (WSE) v3.0 Runtime
- Microsoft Windows Installer v3.1
- Microsoft Management Console v3.0

Required settings for Microsoft Internet Information Services (IIS)

- IIS v6 must have ASP and ASP.NET.
- IIS v7 and IIS v7.5 must have the following settings:
 - Web Management Tools
IIS Management Console
 - Web Management Tools > IIS 6 Management Compatibility
IIS 6 WMI Compatibility
IIS Metabase and IIS 6 configuration compatibility
 - World Wide Web Services > Application Development Features
.Net Extensibility
ASP
ASP.NET
ISAPI Extensions
ISAPI Filters
 - World Wide Web Services > Common HTTP Features
Default Document
Directory Browsing
HTTP Errors
HTTP Redirection
Static Content
 - World Wide Web Services > Security
Request Filtering

General Considerations

Before you install the Sage 200 Suite, it is important that you decide which modules you require.

You must make sure that your system complies with the Sage 200 system requirements. Different modules have different system requirements, and some modules are dependent on other modules being installed first.

You must also consider the following when designing your system:

- You can only install Sage 200 Web Time and Expenses (WTE) if you have Sage 200 Project Accounting.
- You can run Sage 200 with Manufacturing or Sage 200 with Wholesale and Retail, but not both.
- If you are upgrading, you must uninstall your previous version of the Sage 200 Suite and manually remove the existing websites, prior to installing Sage 200 v2011.

For more information, see the Sage 200 Deployment and Installation Guide.

- If you are installing Sage 200 on Microsoft Business Server 2008 or a server that also hosts other web based applications, such as Microsoft Exchange or Microsoft Terminal Services Gateway, you must run the Sage 200 64bit Web Service config.bat before installing the Sage 200 Suite. This file can be found on the Sage 200 Suite v2011 DVD.

For more information, see the Sage 200 Deployment and Installation Guide.

- The Sage 200 Suite is designed to run in a domain based network environment. The only scenario where Sage is supported in a workgroup network environment is where all elements of the Sage 200 Suite are installed on a single server and accessed by clients on the local area network.

- By default, the Sage 200 Self Service (WTE) and Sage 200 Remote Authorisation web sites are only accessible from your internal network. This is because the SSL certificates used to secure these sites are based on the machine name and are not accessible externally.

Sage 200 CRM is installed to the default website. This is not configurable. By default, the website is published using http. This is not a secure connection.

If you want to access Sage 200 Self Service, Sage 200 Remote Authorisation, or Sage 200 CRM externally across the Internet, you must provide a commercial, externally addressable SSL certificate. You must edit the bindings on the website to use the new certificate.
